## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the “electromechanical actuator”, “friction member” and “rotational component” must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Objections***

2. The claims are objected to because they include reference characters which are not enclosed within parentheses. Specifically, ( $\alpha$ ) is not enclosed within parentheses.

Reference characters corresponding to elements recited in the detailed description of the drawings and used in conjunction with the recitation of the same element or group of elements in the claims should be enclosed within parentheses so as to avoid confusion with other numbers or characters which may appear in the claims. See MPEP § 608.01(m).

#### ***Allowable Subject Matter***

3. Claims 1-15 are allowed.

4. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record does not teach an actuator which displaces a wedge in an actuation direction (x) substantially parallel to the direction of rotation to actuate the brake and wherein the wedge angle ( $\alpha$ ) is constant on a first segment effective at the start of brake actuation and greater self boosting is provided by a second segment which follows the first segment, wherein the wedge angle on the second segment is smaller than on the first segment.
